

Cryptomaty

Feature Research aur Humare Platform ke liye Gap Analysis

Kaunse features Cryptomaty (cryptomaty.com) par hain, humare platform mein abhi kya hai, aur kya-kya add kiya ja sakta hai — priority, effort aur codebase location ke saath.

Research date: 3 September 2026

Source: cryptomaty.com ka public website (rendered browser se padha gaya)

Subject platform: Finowings AI - AI chat + Crypto Terminal + Portfolio

Report kis cheez par bharosa karta hai	Status
Public marketing site (/, /features, /about) ka rendered content	Verified - khud padha
Site ke meta tags mein likhe feature claims	Verified - khud padha
web.cryptomaty.com ka andar ka dashboard (login ke peeche)	NOT verified
Broker ka naam (logo se CoinDCX lagta hai, likha kahin nahi)	Inference only
19K+ users, 95% claim, testimonials	Unki marketing claim

1. Executive summary

- **Cryptomaty ek no-code crypto algo-trading platform hai** — ready-made strategy templates, one-click deploy, backtesting, AI coin screener, aur broker se juda hua real-time P&L dashboard.
- **Positioning:** "Your smart Crypto Dashboard for faster & smarter trades", India-focused, abhi **bilkul free (Rs. 0)**, 19,000+ traders ka claim.
- **Humara overlap already strong hai:** backtesting engine, live candle charts, strategy pages, indicator math, Delta Exchange integration aur BYOK API-key storage — ye sab pehle se banaa hua hai.
- **Sabse bada gap: server-side strategy execution.** Humara live monitor sirf tab tak chalta hai jab tak browser tab khula ho. Cryptomaty ka "deployed strategy" background mein chalta hai. Ye ek feature nahi, ek architecture shift hai.
- **Doosra bada gap: paper trading aur per-strategy P&L tracking.** Humare paas demo orders hain par woh strategy signals se jude nahi hain, aur strategy-wise ROI kahin track nahi hota.
- **Teesra gap: AI screener.** Humare paas multi-model AI backend hai — usko multi-coin scan par lagana relatively short kaam hai aur ye Cryptomaty ka sabse zyada bikne wala feature hai.
- **Jo copy nahi karna chahiye:** unke performance claims aur "algo trading profitable hai" type FAQ language — India mein crypto ke liye ye compliance risk hai (Section 9 dekhein).

2. Research kaise kiya gaya

- Site ek JavaScript SPA hai — simple HTTP fetch se sirf page title milta hai. Isliye site ko browser mein render karke uska poora text nikala gaya.
- Padhe gaye pages: **cryptomaty.com/** (home), **/features** (chaaron feature tabs alag-alag kholke), **/about**, aur **web.cryptomaty.com/login**.
- Product ka asli dashboard login ke peeche hai. **Account nahi banaya gaya** — isliye andar ke features (UI, strategy builder ka form, order flow) is report mein verified nahi hain.
- Jahan bhi unki apni marketing language use ki gayi hai, wo quotes mein hai. Jo cheez inference hai wo saaf likhi gayi hai.

Iska matlab: feature list "unhone kya claim kiya" hai, "unhone kya deliver kiya" nahi. Final decision se pehle unka free account banakar dashboard khud dekhna behtar hoga.

3. Cryptomaty - company aur product snapshot

Item	Detail
Website	cryptomaty.com
Web app	web.cryptomaty.com (email + password login, sign-up open hai)
Positioning	"AI-powered crypto algo trading platform to build, backtest, paper trade, and deploy automated strategies with analytics and risk controls" (site ka meta description)
Shuruat	About page ke mutabik idea 2024 mein; site par copyright 2025
Founder	Reyansh Upadhyay (About page par listed)
Pricing	Rs. 0 - "All this at zero cost - free for everyone", "Start Free". Koi paid tier site par nahi dikhta.
Claimed scale	"19K+ trusted trades" / "19,000+ active traders", "95% quickened backtesting", "24hr specialised assistance" - teeno unverified marketing numbers hain
Broker	Ek hi broker logo site par hai. Logo dekhkar CoinDCX lagta hai, par naam kahin likha nahi. Multi-broker P&L ka zikr hai, matlab aage aur brokers ka plan ho sakta hai.

Item	Detail
Market	India - testimonials Indian naam ke hain, support WhatsApp (+91) par hai, About page "traders in India" bolta hai
Channels	Blog (crypto news), YouTube, Telegram community, WhatsApp support

4. Cryptomaty ka feature inventory

Feature ka naam unki hi wording mein. "Evidence" batata hai ki claim kahan se aaya.

#	Feature	Kya karta hai	Evidence
1	Ready-Made Strategy Templates	Professional traders ki pre-built strategies. Template select karo, apply karo, automation baaki sambhalti hai. Coding ya setup ki zarurat nahi.	Features page
2	One-Click Deployed Strategies	Strategy background mein chalti rehti hai - market track karti hai, automatically trade karti hai aur real time mein adjust hoti hai. Manual trading ki zarurat khatam.	Features page
3	Data-Driven Backtest and Analytics	Historical data par strategy test karo, profit aur risk dekho, detailed analytics reports ke saath entry/exit tune karo.	Features page
4	Real-Time Track PNL	Live profit, loss aur ROI - strategy-wise aur broker-wise dono - ek hi dashboard par. Tab switch ya spreadsheet ki zarurat nahi.	Features page
5	AI Screener / Smart Coin Sentiment Detection	AI coins ko bullish/bearish mein sort karta hai, taaki minutes mein pata chale kis coin par kaam karna hai.	Home + testimonial
6	Deploy Custom Strategies (no-code builder)	"Build / test / automate with no-code" - apni strategy banane ka rasta, bina code likhe.	Home page
7	Broker / Exchange integration	"Link exchange APIs are securely connected" - API key se account connect, phir live P&L.	Home + How it works
8	Paper trading	Real paise lagane se pehle simulated trading. Site ke body content mein nahi dikha, sirf meta description mein.	Meta description only
9	Risk controls	Meta description mein "risk controls" likha hai par site par iska koi detail, screen ya explanation nahi hai.	Meta description only
10	Unified dashboard	"Trading strategies, profits, and charts at a single location" - charts, strategies aur broker P&L ek jagah.	Home page
11	4-step onboarding flow	Connect Your Broker -> Scan with AI Screener -> Deploy Strategy -> Track & Optimise. Poora product isi flow ke around samjhaya gaya hai.	Home + Features
12	Content aur community	Crypto news blog (regular posts), 13-question FAQ, YouTube channel, Telegram group, WhatsApp support.	Home + footer
13	Free tier	Rs. 0, "no hidden charges, no initiation fee". Acquisition strategy free access par tiki hai.	Home + About
14	Strategy marketplace	Site ke SEO keywords mein "strategy marketplace" hai - shayad templates ka planned monetisation.	Meta keywords only

5. Humara platform abhi kya karta hai

Codebase ke hisaab se - taaki gap analysis guess par na ho.

Area	Abhi jo hai
AI chat (/)	Multi-model router - Gemini, OpenAI, Claude aur "auto" fallback. Streaming replies, thinking pad, follow-up suggestions, Google grounding/search, file upload (PDF/Excel), conversation history, daily message limits, model badge/selector.
Crypto Terminal - Markets	Delta Exchange se live candles (5 symbols, 8 timeframes), EMA 9/21/50 overlays, chart history days control (1D se 1Y), 24h stat strip, order ticket - demo orders place hote hain aur Delta positions dikhti hain.
Crypto Terminal - Backtest	Do real engines: EMA Crossover aur Range Breakout. Poore params - days, timeframe, SL/target points, lots, EMA periods, RSI filter, range window + timezone, no-entry window. Output: KPIs, win/loss split, full trade log, tested-period summary.
Crypto Terminal - Strategies	5 strategies, har ek ka apna dynamic page (/trade/strategies/[id]): EMA Crossover, RSI Divergence, MACD, Custom EMA, Range Breakout. Har page par live signal monitor (60s refresh), client-side EMA/RSI/MACD/divergence math, chart overlays, event log, aur us strategy ka backtest.
Portfolio (/portfolio)	Broker file import (Excel/PDF), holdings list, invested vs current value, overall P&L, donut/allocation charts, aur "apne portfolio se poochho" AI hook.
Auth aur keys	Register/login, API-key login, profile (naam, email OTP change, password change), Delta API key encrypted storage (Fernet), BYOK exchange accounts - connect/verify/revoke, login history.
Backend	Do services: Flask crypto API (candles, market-info, backtest, orders, Delta/BYOK, auth) aur FastAPI AI backend (chat, streaming, models, charts, prices).

6. Gap analysis - side by side

Verdict: HAVE = ho chuka hai, PARTIAL = base hai par adhoora, MISSING = bilkul nahi.

Capability	Cryptomaty	Humara	Verdict
Historical backtesting	Hai - core feature	Hai - 2 engines, full params, trade log	HAVE
Live candle charts	Dashboard mein	Hai - lightweight-charts, EMA overlays, day range	HAVE
Exchange API connect (BYOK)	Hai - ek broker	Hai - Delta + BYOK accounts, encrypted keys	HAVE
Ready-made strategy templates	Hai - expert templates	5 strategies hardcoded registry mein; save/share nahi	PARTIAL
Custom strategy builder (no-code)	Claim kiya gaya hai	Params tune kar sakte ho, nayi strategy nahi bana sakte	PARTIAL
Live signal monitoring	Server par	Sirf browser tab khula ho tab tak (60s poll)	PARTIAL
Deployed / always-on strategies	Core feature	Nahi - koi background runner nahi	MISSING
Auto order execution	Hai (broker ke through)	Nahi - orders sirf manual/demo	MISSING
Paper trading	Meta mein claim	Demo orders hain par strategy se jude nahi	PARTIAL
Per-strategy P&L / ROI	Core feature	Nahi - sirf backtest ka P&L	MISSING
Per-broker P&L rollup	Core feature	Nahi	MISSING
AI coin screener / sentiment	Core feature	AI backend hai par multi-coin scan nahi	PARTIAL
Advanced analytics (drawdown, Sharpe, equity curve)	"Detailed reports" claim	Nahi - sirf win rate, P&L, trade log	MISSING
Risk controls (daily loss cap, kill switch)	Meta mein claim	Sirf per-trade SL/target	PARTIAL
Alerts / notifications	Nahi dikha	Nahi	MISSING
AI chat assistant	Nahi hai	Hai - multi-model, streaming, grounding	HAVE (edge)
Portfolio tracking + file import	Nahi dikha	Hai	HAVE (edge)
Blog / education / community	Hai - blog, YouTube, Telegram	Nahi	MISSING
Onboarding wizard	4-step flow	Nahi	MISSING

Do jagah hum aage hain: AI chat assistant aur portfolio tracking Cryptomaty ke paas nahi hai. Ye humara differentiator hai - inhe girana nahi chahiye.

7. Kya add karein - prioritised

Effort: S = 1-3 din, M = 1-2 hafte, L = 3+ hafte. Sab estimates single developer ke hisaab se.

P0 - pehle ye (sabse zyada value, base already maujood)

Feature	Kya banana hai aur kyun	Kahan	Effort
Strategy save / templates library	Abhi 5 strategies code mein hardcoded hain. User apne tuned params ko naam dekar save kar sake, list dekhe, dobara chalayе - aur hum kuch "expert templates" ship karein. Ye Cryptomaty ka sabse visible feature hai aur humare paas iska poora base already hai (registry + URL params).	src/lib/strategies.ts + naya DB table + /api/strategies	M
Paper trading (forward test)	Strategy ka live signal aaye to asli order ke bajaye demo order place ho, aur uska P&L track ho. Backend mein demo order endpoint pehle se hai - bas signal se jodna hai. Real-money automation se pehle ye zaroori safety step hai.	StrategyRunner + /api/place-order + naya paper_trades table	M
Per-strategy P&L dashboard	Har strategy ka realised/unrealised P&L, ROI, trade count, win rate - ek dashboard par, broker-wise rollup ke saath. Cryptomaty ka "Track PNL" isi ka naam hai.	Naya /trade/performance page + backend aggregation	M
AI coin screener	Sabhi supported symbols par candles fetch karke indicators + AI se bullish/bearish ranking. Humare paas multi-model AI backend aur candle API dono hain - ye sabse achha effort-to-impact ratio hai aur unka headline feature hai.	Naya /trade/screener + ai_router ka reuse	M
Backtest analytics deepen	Max drawdown, profit factor, average win/loss, expectancy, equity curve chart, monthly breakdown. Abhi sirf win rate aur net P&L hai - yahi "detailed reports" ka matlab hota hai.	backend_api.py backtest response + BacktestResults.tsx	S

P1 - iske baad (bada kaam, bada payoff)

Feature	Kya banana hai aur kyun	Kahan	Effort
Server-side strategy runner ("deploy")	Ye sabse bada architectural gap hai. Ek background worker jo activated strategies ko har candle par evaluate kare, signal generate kare, aur log/paper/live order bheje. Browser band hone par bhi chale. Iske bina "deployed strategy" possible hi nahi.	Naya worker service (Celery/APScheduler) + strategy state DB	L
Live auto-execution	Runner ke upar - signal se asli Delta/BYOK order. Sirf tab jab paper trading stable ho aur risk controls, kill switch aur audit log ban chuke hon.	Runner + /api/byok/orders + risk layer	L
Risk controls layer	Max daily loss, max open positions, max trades per day, per-strategy capital cap, global kill switch. Auto-execution ke liye ye optional nahi hai - pre-requisite hai.	Runner ke andar + settings UI	M
Aur exchanges (CoinDCX, Binance)	Abhi sirf Delta hai. BYOK ka structure already generic hai, isliye naya exchange client add karna incremental kaam hai. CoinDCX Indian users ke liye sabse relevant hai (aur Cryptomaty wahi use karta lagta hai).	fetch_trading_data.py mein naya client + BYOK	M
Alerts / notifications	Signal, order fill, SL hit, daily summary - Telegram bot ya email par. Cryptomaty ke paas bhi nahi dikha, isliye ye ek differentiator ban sakta hai.	Runner hooks + Telegram bot / SMTP (email pehle se hai)	S
Onboarding wizard	4 step: exchange connect -> screener chalao -> strategy chuno -> paper trade shuru. Naye user ko pehle din value dikhti hai.	Naya /onboarding flow	S

P2 - baad mein (nice to have)

Feature	Kya banana hai aur kyun	Effort
Blog / news / education	Cryptomaty regularly crypto news post karta hai - SEO aur trust ke liye. Humare paas AI hai, isliye news summarisation semi-automate ho sakti hai.	S
Strategy marketplace	Users apni strategies share/publish karein, leaderboard ke saath. Unke SEO keywords mein ye plan dikhta hai - hum pehle kar sakte hain.	L
Mobile / PWA	Unka footer khud "mobile smart crypto dashboard" bolta hai. Humara trade terminal desktop-first hai; kam se kam responsive pass zaroori hai.	M
Community (Telegram)	Support + retention channel. Product kaam nahi, distribution kaam hai.	S
Trade markers on chart	Backtest ke entry/exit points seedha chart par - backtest verify karna aasan ho jata hai.	S

8. Suggested sequencing

Phase	Kya	Kyun is order mein
Phase 1	Backtest analytics deepen + strategy save/templates	Dono humare existing code ke upar bante hain, koi naya infra nahi. Turant dikhne wala improvement.
Phase 2	AI coin screener	AI backend aur candle API dono ready hain. Ye woh feature hai jise Cryptomaty ke users sabse zyada praise karte hain, aur humara AI edge yahan kaam aata hai.
Phase 3	Paper trading + per-strategy P&L dashboard	Ye do saath mein hi sense banate hain - paper trades ka data hi P&L dashboard ko bharta hai. Real-money automation ke liye zaroori foundation.
Phase 4	Server-side runner + risk controls	Sabse bada kaam. Tabhi shuru karein jab paper trading stable ho, kyunki runner ki testing paper mode mein hi honi chahiye.
Phase 5	Live auto-execution + aur exchanges	Sirf jab phase 4 stable ho aur risk layer, kill switch, audit log tested hon. Yahan galti ka matlab user ka asli paisa hai.

9. Jo copy nahi karna chahiye

Cheez	Kyun avoid karein
"Is algo trading profitable? Yes..." type FAQ	Unka FAQ seedha bolta hai ki algo trading profits deta hai. India mein crypto SEBI-regulated nahi hai, aur return ka assurance dena consumer-protection aur advertising rules ke hisaab se risky hai. Humein educational framing rakhni chahiye, promise nahi.
Unverified performance numbers (95%, 19K+)	In numbers ka koi source nahi hai. Aise numbers apni site par daalne se credibility banti nahi, jaati hai - aur agar challenge ho gaya to defend nahi kar paoge.
Template testimonials	Unke testimonials ek jaisi language mein likhe lagte hain aur naam repeat hote hain (Rohit Sharma, Pushpa Raj teen-teen baar). Ye trust ghatata hai.
Bina risk layer ke auto-execution	Auto trading pehle, risk controls baad mein - ye sabse mehnga shortcut hai. Kill switch, daily loss cap, withdrawal-disabled API keys aur audit log pehle banao.
Tax/compliance ko ignore karna	Indian users ke liye crypto par 30% tax + 1% TDS lagta hai. Agar hum trades automate kar rahe hain to trade logs export (tax reporting ke liye) ek zaroori feature hai - unke FAQ mein ye issue accept bhi kiya gaya hai.

10. Sources

URL	Kya mila
cryptomaty.com	Home - stats, 4 feature cards, why-choose, how-it-works, testimonials, FAQ, blog links, broker logo
cryptomaty.com/features	Chaar feature tabs ka poora text: Strategy Template, Deployed strategies, Backtest and analytics, Track PNL + 13 FAQ
cryptomaty.com/about	Mission, 2024 shuruat, values, founder note
web.cryptomaty.com/login	Login/sign-up page - app login ke peeche hai (andar nahi gaye)
cryptomaty.com meta tags	"build, backtest, paper trade, and deploy... with analytics and risk controls" aur keywords mein "strategy marketplace"
cryptomaty.com/assets/broker-logo..png	Broker logo - dekhne mein CoinDCX ka icon lagta hai (naam likha nahi hai)

Note: is report ka feature data 3 September 2026 ko liya gaya hai. Cryptomaty free tier par active development mein lagta hai, isliye features badal sakte hain.
